Title: Barangay e-Services: Design and Development of a Web-Based System for Efficient Document Requests and Records Management

I. Introduction

In today's digital age, the demand for fast, reliable, and accessible public services continues to grow, even at the community level. Barangays, as the smallest administrative units in the Philippines, play a crucial role in delivering essential services such as issuing certificates, clearances, and other official documents. However, many barangays still rely on manual processes, which often lead to inefficiencies, long queues, record mismanagement, and delays in service delivery.

To address these challenges, this study proposes the development of a web-based system entitled

"Barangay e-Services: Design and Development of a Web-Based System for Efficient Document Requests and Records Management." The system aims to digitalize and streamline the process of requesting barangay documents, enabling residents to submit requests online while allowing barangay staff to efficiently manage records and monitor transactions in real time.

By integrating modern web technologies, the proposed system seeks to improve service efficiency, reduce administrative workload, and enhance transparency and accessibility within the barangay. Ultimately, this study aspires to contribute to the ongoing digital transformation of local government services, providing a more convenient and responsive experience for both residents and barangay personnel.

II. System Purpose

This system is designed to simplify and modernize the process of requesting and managing barangay documents by providing a convenient, secure, and efficient web-based platform for both residents and barangay staff. Its purpose is to eliminate long queues, reduce manual paperwork, and improve service delivery by allowing residents to submit requests online, upload necessary documents, and track the status of their applications in real time. At the same time, the system supports barangay personnel by organizing records digitally, streamlining the review and approval process, and ensuring accurate and timely communication through automated notifications. Overall, the system aims to enhance transparency, accessibility, and efficiency in delivering essential public services within the community.

III. Target Users

- **Barangay Residents** – They use the system to request documents, upload requirements, and track their application status online, making the process faster and more convenient.
- **Barangay Staff** – They handle and process requests, review submitted documents, and update application statuses, helping reduce manual workload and improve efficiency.

COMPUTER STUDIES DEPARTMENT
Bachelor of Science in Information Technology

- **Barangay Secretary** – Responsible for preparing official documents and maintaining accurate and organized digital records for easy retrieval.
- **Barangay Captain (Optio**– Oversees approvals and monitors operations to ensure transparency, accountability, and proper authorization.
- **System Administrator** – Manages the system, maintains security, handles user accounts, and ensures the platform runs smoothly without technical issues.

IV. Key Features

1. **Online Document Request** – Allows residents to request barangay documents anytime without visiting the office, making the process more convenient and accessible.
2. **User Registration and Login** – Ensures that only authorized users can access the system, providing security and personalized access.
3. **Request Tracking System** – Enables users to monitor the status of their requests (e.g., Pending, Approved, Ready for Pickup) in real time.
4. **Document Upload Feature** – Allows residents to submit required files online, reducing the need for physical submission.
5. **Admin Dashboard** – Provides barangay staff with a centralized interface to view, manage, approve, or reject requests efficiently.
6. **Status Notification System** – Automatically notifies users about updates on their requests, improving communication and transparency.
7. **Digital Record Management** – Stores all requests and user data in an organized database for easy access and retrieval.
8. **Search and Filter Function** – Helps admins quickly find specific requests or records, improving workflow and productivity.
9. **Pickup Scheduling** – Allows admins to set a date for document release, helping avoid overcrowding in the barangay office.
10. **Secure Data Handling** – Protects user information and documents through authentication, validation, and proper access control.
